## TorrentCascade [Win/Mac]

TorrentCascade is a basic piece of software that was developed to allow its users search popular torrent websites from the comfort of their desktops. It's all very basic once you launch the application, mostly because it comprises just a limited number of options, along with a plain and simple interface. It shows the search engine right in the main window, but you can only search a maximum of five torrent websites at a time. A search field is obviously available, and so is a filter function to help you sort the results and quickly reach the torrent link you look for. There is no dedicated configuration screen, but right-clicking the displayed results lets you set up timeout and view the search history. What's more, the main window shows important torrent information, such as title, size, seeders and leechers. As you can see, TorrentCascade doesn't require advanced computer knowledge to serve its purpose, which is very good news for rookies, but it also lacks a lot of important features. You can't for instance configure a BitTorrent client to work with TorrentCascade and start downloads on the go and you are not allowed to use more than five search engines at a time. On the good side, TorrentCascade runs smoothly on all Windows versions, but it sometimes completes a search in more than a minute. Overall, TorrentCascade may sound like a very appealing solution, but one thing is for sure: it needs several improvements in order to become the top product we all want. Companies are rapidly turning to automation to generate more value from their physical assets, which include things like assets like equipment, facilities, inventory, products and even people. Ultimately, though, it is technology and automation tools that will be responsible for driving widespread adoption of smart technologies. The world of technology is changing faster than ever before, and smart, connected buildings and smart cities will play a large role in accelerating this change. Today, a lot of the technology aimed at smart buildings is really focused on energy savings. But imagine if buildings could also create value out of the countless data points they generate on everything from remote monitoring to the ability to forecast problems and changes in weather? This is the future, and it is here now. Today, the way people interact with the companies that own their buildings has radically changed. Now, technology is the enabler, and it can help facilities go from being solid to smart. A smart building is one that works with the

### What's New in the TorrentCascade?

TorrentCascade is a basic piece of software that was developed to allow its users search popular torrent websites from the comfort of their desktops.
